

TRAFFIC **SCANNER**

App for Android smartphones

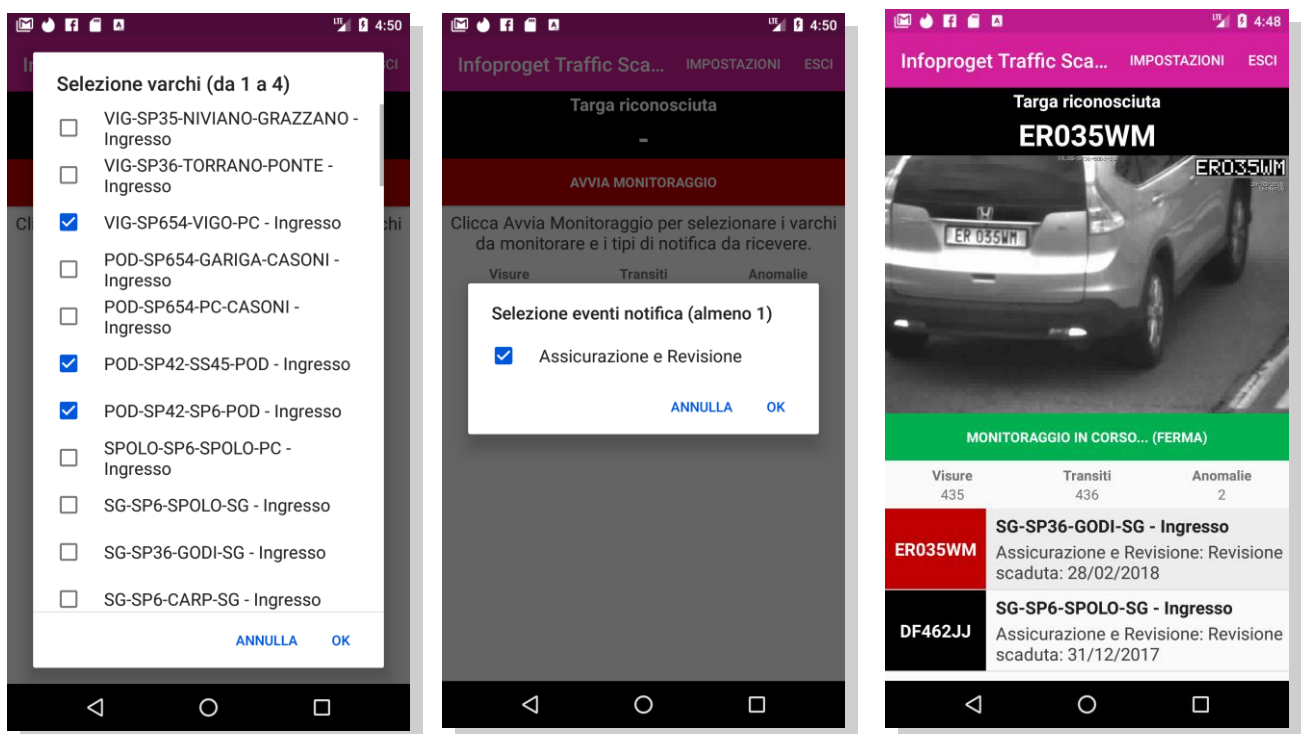

Versione 5.0

Traffic Scanner Android App

Traffic Scanner includes an App for Android mobile devices developed to allow the reception of alarms generated by vehicles in transit.

The App shows a notification when a plate no. present in one black list is detected by one OCR camera

The APP operation is very simple: after entering the authentication credentials to the Traffic Scanner server, simply specify the following parameters:

Gate selection

Notification type selection

Receiving alarms

By enabling monitoring, the APP will start displaying the license plate, the photo and the positivity found for each vehicle that presents anomalies according to the criteria that have been set.
